Tor: How To Set Up Tor!

Tor (network)

Internet traffic via random paths through these relays. Using Tor makes it more difficult to trace a user's Internet activity by preventing any single point

Tor is a free overlay network for enabling anonymous communication. It is built on free and open-source software run by over seven thousand volunteer-operated relays worldwide, as well as by millions of users who route their Internet traffic via random paths through these relays.

Using Tor makes it more difficult to trace a user's Internet activity by preventing any single point on the Internet (other than the user's device) from being able to view both where traffic originated from and where it is ultimately going to at the same time. This conceals a user's location and usage from anyone performing network surveillance or traffic analysis from any such point, protecting the user's freedom and ability to communicate confidentially.

The Brandenburg Gate (German: Brandenburger Tor [?b?andn??b???? ?to???]) is an 18th-century neoclassical monument in Berlin. One of the best-known landmarks of Germany, it was erected on the site of a former city gate that marked the start of the road from Berlin to Brandenburg an der Havel, the former capital of the Margraviate of Brandenburg. The current structure was built from 1788 to 1791 by orders of King Frederick William II of Prussia, based on designs by the royal architect Carl Gotthard Langhans. The bronze sculpture of the quadriga crowning the gate is a work by the sculptor Johann Gottfried Schadow.

The Brandenburg Gate is located in the western part of the city centre within Mitte, at the junction of Unter den Linden and Ebertstraße. The gate dominates the Pariser Platz to the...

"Macht hoch die Tür" ("Fling wide the door") is a popular German Advent hymn, written in 17th century Ducal Prussia. The lyrics were written by Georg Weissel in 1623 for the inauguration of the Altroßgärter Kirche in Königsberg. "Macht hoch die Tür" appears as number 1 in the current German Protestant hymnal Evangelisches Gesangbuch (EG 1). It is also part of the Catholic hymnal Gotteslob (GL 218), among others. Vidalia is a discontinued cross-platform GUI for controlling Tor, built using Qt. The name comes from the Vidalia onion since Tor uses onion routing. It allows the user to start, stop or view the status of Tor, view, filter or search log messages, monitor bandwidth usage, and configure some aspects of Tor. Vidalia also makes it easier to contribute to the Tor network by optionally helping the user set up a Tor relay.

Another prominent feature of Vidalia is its Tor network map, which lets the user see the geographic location of relays on the Tor network, as well as where the user's application traffic is going.

.onion is a special-use top-level domain name designating an anonymous onion service, which was formerly known as a "hidden service", reachable via the Tor network. Such addresses are not actual DNS names, and the .onion TLD is not in the Internet DNS root, but with the appropriate proxy software installed, Internet programs such as web browsers can access sites with .onion addresses by sending the request through the Tor network.

The "onion" name refers to onion routing, the technique used by Tor to achieve a degree of anonymity.

The purpose of using such a system is to make both the information provider and the person accessing the information more difficult to trace, whether by one another, by an intermediate network host, or by an outsider. Sites that offer dedicated .onion addresses may...
