

2 Hp Garbage Disposal

Garbage disposal unit

A garbage disposal unit (also known as a waste disposal unit, food waste disposer (FWD), in-sink macerator, garbage disposer, or garburator) is a device

A garbage disposal unit (also known as a waste disposal unit, food waste disposer (FWD), in-sink macerator, garbage disposer, or garburator) is a device, usually electrically powered, installed under a kitchen sink between the sink's drain and the trap. The device shreds food waste into pieces small enough—generally less than 2 mm (0.079 in) in diameter—to pass through plumbing.

Pomona Waste To Energy Power Station

To Energy Power Station, also Harare Solid Waste Plant, is a 22 MW (30,000 hp) solid waste-fired thermal power plant under development in Zimbabwe. The

Pomona Waste To Energy Power Station, also Harare Solid Waste Plant, is a 22 MW (30,000 hp) solid waste-fired thermal power plant under development in Zimbabwe. The Harare City Council has awarded Geogenix BV, a Dutch waste management company, the concession contract to design, finance, construct, operate, maintain and own the power station for thirty years after commercial commissioning. As raw material, the power station is designed to use solid waste gathered from homes, businesses and industries in the city of Harare, the country's national capital. A 30-year power purchase agreement (PPA) has been signed between the developers of the power station and Zimbabwe Electricity Supply Authority (ZESA).

Biomedical waste

littered around the hospital or thrown into regular garbage bins. Drug disposal – Safe disposal of unused drugs Electronic waste – Discarded electronic

Biomedical waste or hospital waste is any kind of waste containing infectious (or potentially infectious) materials generated during the treatment of humans or animals as well as during research involving biologics. It may also include waste associated with the generation of biomedical waste that visually appears to be of medical or laboratory origin (e.g. packaging, unused bandages, infusion kits etc.), as well research laboratory waste containing biomolecules or organisms that are mainly restricted from environmental release. As detailed below, discarded sharps are considered biomedical waste whether they are contaminated or not, due to the possibility of being contaminated with blood and their propensity to cause injury when not properly contained and disposed. Biomedical waste is a type...

Marine plastic pollution

on vessel-borne garbage and its disposal. It sets limit on what may be disposed at sea and imposes a complete ban on the at-sea disposal of plastics. Stephanie

Marine plastic pollution is a type of marine pollution by plastics, ranging in size from large original material such as bottles and bags, down to microplastics formed from the fragmentation of plastic material. Marine debris is mainly discarded human rubbish which floats on, or is suspended in the ocean. Eighty percent of marine debris is plastic. Microplastics and nanoplastics result from the breakdown or photodegradation of plastic waste in surface waters, rivers or oceans. Recently, scientists have uncovered nanoplastics in heavy snow, more specifically about 3,000 tons that cover Switzerland yearly.

It is approximated that there is a stock of 86 million tons of plastic marine debris in the worldwide ocean as of the end of 2013, assuming that 1.4% of global plastics produced from 1950 to...

Grinder pump

an alarm panel. A pump for household use is usually rated for 1 , 1.5, or 2 hp. A cutting mechanism macerates waste and grinds items that are not normally

A grinder pump (also called a macerator pump) is a wastewater conveyance device. Waste from water-using household appliances (toilets, bathtubs, washing machines, etc.) flows through the home's pipes into the grinder pump's holding tank. Once the wastewater inside the tank reaches a specific level, the pump will turn on, grind the waste into a fine slurry, and pump it to the central sewer system or septic tank.

Grinder pumps can be installed in the basement or in the yard. If installed in the yard, the holding tank must be buried deep enough that the pump and sewage pipes are below the frost line.

A grinder pump is different from a sump pump or effluent pump. There are two types of grinder pumps, semi-positive displacement (SPD) and centrifugal.

Aircraft lavatory

Caproni crashed on its second flight and never saw service. The Handley Page H.P.42 airliner, designed in 1928, was fitted with toilets near the center of

An aircraft lavatory or plane toilet is a small unisex room on an aircraft with a toilet and sink. They are commonplace on passenger flights except some short-haul flights. Aircraft toilets were historically chemical toilets, but many now use a vacuum flush system instead.

Glossary of environmental science

rehabilitation, restoration, and offset. mobile garbage bin

A wheeled kerbside container for the collection of garbage or other materials. monoculture - the practice - This is a glossary of environmental science.

Environmental science is the study of interactions among physical, chemical, and biological components of the environment. Environmental science provides an integrated, quantitative, and interdisciplinary approach to the study of environmental systems.

Japanese submarine I-152

after 10 April 1942, she also took part in testing different submarine garbage disposal units. She was renumbered I-152 (??????????, I-go dai-hyaku-go-jyuni

I-52 (??????????, I-go dai-go-jyuni sensuikan), later I-152 (??????????, I-go dai-hyaku-go-jyuni sensuikan), was the second prototype of the Kaidai-class submarine of the Imperial Japanese Navy. Commissioned in 1925, she became a training ship in 1935 and was decommissioned in 1942 during the early months of the Pacific campaign of World War II. She subsequently served as the stationary training hulk Haikan No. 14 and was scrapped after the war.

Induction motor

induction motors are used extensively for smaller loads, such as garbage disposals and stationary power tools. Although traditionally used for constant-speed

An induction motor or asynchronous motor is an AC electric motor in which the electric current in the rotor that produces torque is obtained by electromagnetic induction from the magnetic field of the stator winding. An induction motor therefore needs no electrical connections to the rotor. An induction motor's rotor can be either wound type or squirrel-cage type.

Three-phase squirrel-cage induction motors are widely used as industrial drives because they are self-starting, reliable, and economical. Single-phase induction motors are used extensively for smaller loads, such as garbage disposals and stationary power tools. Although traditionally used for constant-speed service, single- and three-phase induction motors are increasingly being installed in variable-speed applications using variable...

Electronic waste

refurbishment, reuse, resale, salvage recycling through material recovery, or disposal are also considered e-waste. Informal processing of e-waste in developing

Electronic waste (or e-waste) describes discarded electrical or electronic devices. It is also commonly known as waste electrical and electronic equipment (WEEE) or end-of-life (EOL) electronics. Used electronics which are destined for refurbishment, reuse, resale, salvage recycling through material recovery, or disposal are also considered e-waste. Informal processing of e-waste in developing countries can lead to adverse human health effects and environmental pollution. The growing consumption of electronic goods due to the Digital Revolution and innovations in science and technology, such as bitcoin, has led to a global e-waste problem and hazard. The rapid exponential increase of e-waste is due to frequent new model releases and unnecessary purchases of electrical and electronic equipment...
