Equus conversidens, or the Mexican horse, was a Pleistocene species of horse, now extinct, that inhabited North America.

The holotype of Equus conversidens, a partial palate, was unearthed in Pleistocene deposits northeast of Mexico City, Mexico. In January 1963, a partial skeleton was found in the city of Canyon, Texas in a white clay bed during the excavation of a basement, and was referred to E. conversidens by Dalquest and Hughes (1965), who interpreted the species as medium to small-sized, and added additional records of the species from Texas (including a skeleton from Slaton), Arizona, New Mexico, Oklahoma, Kansas and Florida, synonymizing Equus francisci, Equus tau, E. littoralis, E. achates, and E. barcenaei with E. conversidens.

Equus neogeus

morphologically variable species Equus neogeus. Some authors continue to recognise three species, restricting Equus neogeus to large-sized individuals

Equus neogeus is an extinct species of equine native to South America during the Pleistocene. It was formerly thought to be several distinct species within the subgenus Amerhippus, but was later shown to be a single morphologically variable species. It is thought to be closely related to true horses.

The Hyundai Equus (Korean: ?? ???; RR: Hyundai Equus) was a full-sized, front-engine, rear-wheel-drive luxury sedan manufactured and marketed by Hyundai Motor Company from 1999 to 2016. It was produced over two generations in a four-door, five passenger configuration. The nameplate derives from the Latin equus, meaning "horse."

A second generation was released in 2009. As of August 2014, it was sold in South Korea, Russia, China, United States, Canada, Central America, and South America — as well as in the Middle East under the Hyundai Centennial

(?? ????) nameplate.

On November 4, 2015, Hyundai officially announced it would move the Genesis model to Hyundai's new luxury vehicle division, Genesis Motor. The 2016 successor to the Hyundai Equus was rebranded as Genesis G90 (EQ900 in Korea...

Equus () is a genus of mammals in the perissodactyl family Equidae, which includes horses, asses, and zebras. Within the Equidae, Equus is the only recognized extant genus, comprising seven living species. Like Equidae more broadly, Equus has numerous extinct species known only from fossils. The genus originated in North America and dispersed into the Old World and South America during the Early and Middle Pleistocene. Equines are odd-toed ungulates with slender legs, long heads, relatively long necks, manes (erect in most subspecies), and long tails. All species are herbivorous, and mostly grazers, with simpler digestive systems than ruminants but able to subsist on lower-quality vegetation.

While the domestic horse and donkey (along with their feral descendants) exist worldwide, wild equine...

Equus is a quarterly magazine for horse owners that was first published in November 1977.

The intent of the magazine is succinctly stated by founding editor and publisher Ami Shinitzky's original working title: The Horseman's Veterinary Journal. In the editorial in the first issue Shinitzky wrote, "EQUUS serves as a bridge between the veterinarian and the horse owner, bringing to our readers the expertise of the nation's leading authorities on the care and maintenance of the animal through the talents of writers who are able to translate often technical information into a language easily understood and rapidly absorbed."

Carrying the slogan, "The horse owner's resource", Equus is meant to be collected by subscribers so they might use articles in past issues as a reference. Each issue has a...
