Linguistic prescription

Linguistic prescription is the establishment of rules defining publicly preferred usage of language, including rules of spelling, pronunciation, vocabulary

Linguistic prescription is the establishment of rules defining publicly preferred usage of language, including rules of spelling, pronunciation, vocabulary, grammar, etc. Linguistic prescriptivism may aim to establish a standard language, teach what a particular society or sector of a society perceives as a correct or proper form, or advise on effective and stylistically apt communication. If usage preferences are conservative, prescription might appear resistant to language change; if radical, it may produce neologisms. Such prescriptions may be motivated by consistency (making a language simpler or more logical); rhetorical effectiveness; tradition; aesthetics or personal preferences; linguistic purism or nationalism (i.e. removing foreign influences); or to avoid causing offense (etiquette...

Prescription drug addiction

Prescription drug addiction is the chronic, repeated use of a prescription drug in ways other than prescribed for, including using someone else's prescription

Prescription drug addiction is the chronic, repeated use of a prescription drug in ways other than prescribed for, including using someone else's prescription. A prescription drug is a pharmaceutical drug that may not be dispensed without a legal medical prescription. Drugs in this category are supervised due to their potential for misuse and substance use disorder. The classes of medications most commonly abused are opioids, central nervous system (CNS) depressants and central nervous stimulants. In particular, prescription opioid is most commonly abused in the form of prescription analgesics.

Prescription drug addiction was recognized as a significant public health and law enforcement problem worldwide in the past decade due to its medical and social consequences. Particularly, the United...

Exercise prescription

Exercise prescription commonly refers to the specific plan of fitness-related activities that are designed for a specified purpose, which is often developed

Exercise prescription commonly refers to the specific plan of fitness-related activities that are designed for a specified purpose, which is often developed by a fitness or rehabilitation, or Exercise medicine specialist for the client or patient. Due to the specific and unique needs and interests of the client/patient, the goal of exercise prescription should focus on motivation and customization, thus making achieving goals more likely to become successful. Exercise prescription should take into account the patient's medical history, and a pre-examination of a patient's physical fitness to make sure a person has the capacity to perform the exercises.

Prescription drug prices in the United States

Prescription drug prices in the United States are among the highest in the world, both in total spending and per capita costs. In 2023, the U.S. spent

Prescription drug prices in the United States are among the highest in the world, both in total spending and per capita costs. In 2023, the U.S. spent over \$600 billion on prescription medications—more than any other country on a per-person basis.

Despite this high level of spending, affordability remains a major issue: nearly one in four Americans report difficulty affording their medications, and about 30% say they have skipped or rationed doses due to cost. These outcomes reflect complex factors including patent protections, lack of price negotiation for public insurance programs, limited generic competition, and opaque pricing practices throughout the supply chain.

Unlike many peer nations, the U.S. does not impose direct price controls or rely on centralized bargaining for most drugs....

NHS Business Services Authority

Healthcare Services NHS Prescription Services The NHSBSA manages over £35 billion of spend annually.[citation needed] This includes prescription and dental payments

The NHS Business Services Authority (NHSBSA) is an executive non-departmental public body of the Department of Health and Social Care which provides a number of support services to the National Health Service in England and Wales. It was created on 1 October 2005 following a review by the Department of Health of its "arm's length bodies". It began operating on 1 April 2006, bringing together five previously separate NHS business support organisations.

The body provides services to NHS organisations, NHS contractors and patients which include:

NHS Help With Health Costs

Student Services

NHS Dental Services

Administration of the NHS Pension Scheme

Scanning Services

NHS Jobs

Electronic Staff Record

Overseas Healthcare Services

NHS Prescription Services

The Fruit & Veggie Prescription Program

The Fruit & Vegetable Prescription Program, also known as FVRx, is one of three of Wholesome Wave's programs. The program aims to provide under-served

The Fruit & Vegetable Prescription Program, also known as FVRx, is one of three of Wholesome Wave's programs. The program aims to provide under-served communities with fresh fruits and vegetables by allowing consumers to exchange healthcare provider-generated “prescriptions” for local fresh fruit and vegetables at participating, local farmers' markets.

Prescription Act 1832

The Prescription Act 1832 (2 & 3 Will. 4. c. 71) is an Act of the Parliament of the United Kingdom concerning English land law, and particularly the method

The Prescription Act 1832 (2 & 3 Will. 4. c. 71) is an Act of the Parliament of the United Kingdom concerning English land law, and particularly the method for acquiring an easement. It was passed on 1 August 1832.

Medication costs

are a common health care cost for many people and health care systems. Prescription costs are the costs to the end consumer. Medication costs are influenced

Medication costs, also known as drug costs are a common health care cost for many people and health care systems. Prescription costs are the costs to the end consumer. Medication costs are influenced by multiple factors such as patents, stakeholder influence, and marketing expenses. A number of countries including Canada, parts of Europe, and Brazil use external reference pricing as a means to compare drug prices and to determine a base price for a particular medication. Other countries use pharmacoeconomics, which looks at the cost/benefit of a product in terms of quality of life, alternative treatments (drug and non-drug), and cost reduction or avoidance in other parts of the health care system (for example, a drug may reduce the need for a surgical intervention, thereby saving money). Structures...

Electronic prescribing

Electronic prescription (e-prescribing or e-Rx) is the computer-based electronic generation, transmission, and filling of a medical prescription, taking

Electronic prescription (e-prescribing or e-Rx) is the computer-based electronic generation, transmission, and filling of a medical prescription, taking the place of paper and faxed prescriptions. E-prescribing allows a physician, physician assistant, pharmacist, or nurse practitioner to use digital prescription software to electronically transmit a new prescription or renewal authorization to a community or mail-order pharmacy. It outlines the ability to send error-free, accurate, and understandable prescriptions electronically from the healthcare provider to the pharmacy. E-prescribing is meant to reduce the risks associated with traditional prescription script writing. It is also one of the major reasons for the push for electronic medical records. By sharing medical prescription information...

Body odor

Body odor or body odour (BO) is present in all animals and its intensity can be influenced by many factors (behavioral patterns, survival strategies)

Body odor or body odour (BO) is present in all animals and its intensity can be influenced by many factors (behavioral patterns, survival strategies). Body odor has a strong genetic basis, but can also be strongly influenced by various factors, such as sex, diet, health, and medication. The body odor of human males plays an important role in human sexual attraction, as a powerful indicator of MHC/HLA heterozygosity. Significant evidence suggests that women are attracted to men whose body odor is different from theirs, indicating that they have immune genes that are different from their own, which may produce healthier offspring.
