PHP

PHP 8.1: 30.4% of PHP 8 (13.8%) PHP 8.0: 19.6% of PHP 8 (8.88%) PHP 7.4: 74.3% of PHP 7 (32.5%) PHP 7.3: 10.5% of PHP 7 (4.59%) PHP 7.2: 8.10% of PHP

PHP is a general-purpose scripting language geared towards web development. It was originally created by Danish-Canadian programmer Rasmus Lerdorf in 1993 and released in 1995. The PHP reference implementation is now produced by the PHP Group. PHP was originally an abbreviation of Personal Home Page, but it now stands for the recursive backronym PHP: Hypertext Preprocessor.

PHP code is usually processed on a web server by a PHP interpreter implemented as a module, a daemon or a Common Gateway Interface (CGI) executable. On a web server, the result of the interpreted and executed PHP code—which may be any type of data, such as generated HTML or binary image data—would form the whole or part of an HTTP response. Various web template systems, web content management systems, and web frameworks...

Philippine peso

"\$" used throughout Spanish America. Alternative symbols used are "PHP",, "PhP",, "Php",, or just "P",. The monetary policy of the Philippines is conducted

The Philippine peso, also referred to by its Filipino name piso (Philippine English: PEH-saw, PEE-, plural pesos; Filipino: piso [ˈpisʔ, ˈpʔsʔ]; sign: ₱; code: PHP), is the official currency of the Philippines. It is subdivided into 100 sentimo, also called centavos.

The peso has the symbol "₱", introduced during American rule in place of the original peso sign "\$" used throughout Spanish America. Alternative symbols used are "PHP", "PhP", "Php", or just "P".

The monetary policy of the Philippines is conducted by the Bangko Sentral ng Pilipinas (BSP), established on January 3, 1949, as its central bank. It produces the country's banknotes and coins at its Security Plant Complex, which is set to move to New Clark City in Capas, Tarlac.

PHP-Nuke

PHP-Nuke is a web-based automated news publishing and content management system based on PHP and MySQL originally written by Francisco Burzi. The system

PHP-Nuke is a web-based automated news publishing and content management system based on PHP and MySQL originally written by Francisco Burzi. The system is controlled using a web-based user interface. PHP-Nuke was originally a fork of the Thatware news portal system by David Norman.

PHP-Nuke was originally released under the GNU General Public License as free software. Versions after 7.5 required a license fee; from version 8.3 it became free again. This is permitted under the GPL (providing the source code is included), and the purchaser of the software has the right to freely distribute the source code of the product. Burzi no longer owns the PHP-Nuke site.

As of version 5.6, the display of a copyright message on webpages is required in accordance with the GPL section 2(c).

PHP-Nuke requires...

PHP-GTK

PHP-GTK is a set of language bindings for the programming language PHP which allow GTK graphical user interface (GUI) applications to be written in PHP

PHP-GTK is a set of language bindings for the programming language PHP which allow GTK graphical user interface (GUI) applications to be written in PHP. PHP-GTK provides an object-oriented programming interface to GTK classes and functions. PHP-GTK partly supports GTK2, but GTK3 is unsupported.

PHP License

The PHP License is the open-source license under which the PHP scripting language is released. The PHP License is designed to encourage widespread adoption

The PHP License is the open-source license under which the PHP scripting language is released. The PHP License is designed to encourage widespread adoption of the source code. Redistribution is permitted in source or binary form with or without modifications, with some caveats.

Version 3 of PHP used a dual license—PHP 3's source is available under either the PHP License or the GNU General Public License (GPL). This practice was discontinued as of PHP 4, with PHP's developers citing the restrictions on reuse associated with the GPL's copyleft enforcement as being the reason for dropping it. The Zend Engine, the core of the PHP interpreter, is separately licensed under the similar Zend Engine License, which contains similar naming restrictions to the PHP license (applying to the names "Zend"...

phpBB is an Internet forum package written in the PHP scripting language. The name "phpBB" is an abbreviation of PHP Bulletin Board. Available under the

phpBB is an Internet forum package written in the PHP scripting language. The name "phpBB" is an abbreviation of PHP Bulletin Board. Available under the GNU General Public License, phpBB is free and open-source.

Features of phpBB include support for multiple database engines (MariaDB, Microsoft SQL Server, MySQL, PostgreSQL, SQLite, Oracle Database), flat message structure (as opposed to threaded), hierarchical subforums, topic split/merge/lock, user groups, multiple attachments per post, full-text search, plugins and various notification options (e-mail, Jabber instant messaging, ATOM feeds).

PHP-Fusion

PHP-Fusion is a free and open-source web framework based on PHP and MySQL & MariaDB that has an integrated content management system (CMS) among many

PHP-Fusion is a free and open-source web framework based on PHP and MySQL & MariaDB that has an integrated content management system (CMS) among many other features.

To function, PHP-Fusion has to be installed on a web server, this can be either locally hosted or remotely hosted.

PHP-Fusion was one of the five winner finalists at the Open Source CMS Awards in 2007.

PHP Family

Industries Ltd. PHP Power Generation Plant Ltd. PHP Power Company Ltd. PHP Float Glass Industries Ltd. PHP Agro Products Ltd. PHP Corporation Ltd. PHP Overseas

PHP Family (previously known as PHP Group of Industries) is a Bangladeshi conglomerate based in Chittagong. It was envisioned in 1969 by Sufi Mohammed Mizanur Rahman who is the chairman of the group as of 2018. The PHP Group has steel, float glass, aluminum, textiles, power, petro, refinery, financial service, and agro business interests.
