Wheel studs are the threaded fasteners that hold on the wheels of many automobiles. They are semi-permanently mounted directly to the vehicle hub, usually through the brake drum or brake disk. Lug nuts are fastened onto the wheel stud to secure the wheel. When a wheel is removed for tire changes etc., the stud remains in the hub.

Many automobiles instead use bolts to do this, where removable bolts screw into the wheel hub.

Wheel studs can be either factory equipment or aftermarket add-ons.
