The AGM-63 was a missile design produced by the United States. It was conceived in March 1962 when the U.S. Navy issued two requirements for long-range Anti-Radiation Missiles (ARMs) to complement the short-range AGM-45 Shrike. The first was to operate over ranges of up to 50 nmi (90 km), while the second would be capable of operating out to 100 nmi (180 km). Development of the ARM I was approved in 1963; the missile was given the designation ZAGM-63A. However no funds were made available as other ARM programs such as the improved AGM-45 Shrike, and the development of the AGM-78 Standard ARM and AGM-88 HARM were given a higher priority.

The AGM-63 continued on for several years as a purely theoretical missile. No design or configuration was ever settled on, and the project was cancelled in the late 1960s.

Rule 63, commonly referred to as genderbend, is an Internet meme that states that, as a rule, "for every character there is a gender swapped version of that character". It is one of the "Rules of the Internet" that began in 2006 as a Netiquette guide on 4chan and were eventually expanded upon by including deliberately mocking rules, of which Rule 63 is an example. It began to see general use in fandom communities as a term to refer to both fan-made and official gender flips of existing fictional characters.
