The following is a general comparison of BitTorrent clients, which are computer programs designed for peer-to-peer file sharing using the BitTorrent protocol.

The BitTorrent protocol coordinates segmented file transfer among peers connected in a swarm. A BitTorrent client enables a user to exchange data as a peer in one or more swarms. Because BitTorrent is a peer-to-peer communications protocol that does not need a server, the BitTorrent definition of client differs from the conventional meaning expressed in the client–server model.

Bram Cohen, author of the BitTorrent protocol, made the first BitTorrent client, which he also called BitTorrent, and published it in July 2001.

IRC (Internet Relay Chat) is a text-based chat system for instant messaging. IRC is designed for group communication in discussion forums, called channels, but also allows one-on-one communication via private messages as well as chat and data transfer, including file sharing.

Internet Relay Chat is implemented as an application layer protocol to facilitate communication in the form of text. The chat process works on a client–server networking model. Reality therapy (RT) is an approach to psychotherapy and counseling developed by William Glasser in the 1960s. It differs from conventional psychiatry, psychoanalysis and medical model schools of psychotherapy in that it focuses on what Glasser calls "psychiatry's three Rs" – realism, responsibility, and right-and-wrong

– rather than mental disorders. Reality therapy maintains that most people suffer from socially universal human conditions rather than individual mental illnesses, and that failure to attain basic needs leads to a person's behavior moving away from the norm. Since fulfilling essential needs is part of a person's present life, reality therapy does not concern itself with a person's past. Neither does this type of therapy deal with unconscious mental processes.

Clientelism or client politics is the exchange of goods and services for political support, often involving an implicit or explicit quid-pro-quo. It is closely related to patronage politics and vote buying.

Clientelism involves an asymmetric relationship between groups of political actors described as patrons, brokers, and clients. In client politics, an organized interest group benefits at the expense of the public. Client politics may have a strong interaction with the dynamics of identity politics. This is particularly common in an elite pluralist or rigidly duopolistic system, such as in the United States, where lobbying can have considerable power shaping public policy. The opposite of client politics is entrepreneurial politics, or conviction politics. Although many definitions for clientelism...
