Q, or q, is the seventeenth letter of the Latin alphabet, used in the modern English alphabet, the alphabets of other western European languages and others

Q, or q, is the seventeenth letter of the Latin alphabet, used in the modern English alphabet, the alphabets of other western European languages and others worldwide. Its name in English is pronounced , most commonly spelled cue, but also kew, kue, and que.

Fraktur

Fraktur (German: [f?ak?tu???]) is a calligraphic hand of the Latin alphabet and any of several blackletter typefaces derived from this hand. It is designed such that the beginnings and ends of the individual strokes that make up each letter will be clearly visible, and often emphasized; in this way it is often contrasted with the curves of the Antiqua (common) typefaces where the letters are designed to flow and strokes connect together in a continuous fashion. The word "Fraktur" derives from Latin fr?ct?ra ("a break"), built from fr?ctus, passive participle of frangere ("to break"), which is also the root for the English word "fracture". In non-professional contexts, the term "Fraktur" is sometimes misused to refer to all blackletter typefaces — while Fraktur typefaces do fall under that...

Rational number

the quotient or fraction? $p \neq \{ \forall f \in \{p\} \neq q\} \} \}$? of two integers, a numerator $p \in \{p\} \neq q\} \}$? of two integers, a numerator $p \in \{p\} \neq q\} \}$? of two integers, a numerator $p \in \{p\} \neq q\} \}$? of two integers, a numerator $p \in \{p\} \neq q\} \}$? of two integers, a numerator $p \in \{p\} \neq q\} \}$? of two integers, a numerator $p \in \{p\} \neq q\} \}$? of two integers, a numerator $p \in \{p\} \neq q\} \}$? of two integers, a numerator $p \in \{p\} \neq q\} \}$? of two integers, a numerator $p \in \{p\} \neq q\} \}$? of two integers, a numerator $p \in \{p\} \neq q\} \}$? of two integers, a numerator $p \in \{p\} \neq q\} \}$? of two integers, a numerator $p \in \{p\} \neq q\} \}$? of two integers, a numerator $p \in \{p\} \neq q\} \}$?

In mathematics, a rational number is a number that can be expressed as the quotient or fraction?

```
p
q
{\displaystyle {\tfrac {p}{q}}}
? of two integers, a numerator p and a non-zero denominator q. For example, ?
3
7
{\displaystyle {\tfrac {3}{7}}}
? is a rational number, as is every integer (for example,
?
5
```

```
?
5
1
{\displaystyle -5={\tfrac {-5...
Material conditional
material implication, a formula P ? Q \{ \langle displaystyle P \rangle \} \} is true unless P \{ \langle displaystyle P \rangle \} is true and Q \}
\{\displaystyle\ Q\} is false. Material implication
The material conditional (also known as material implication) is a binary operation commonly used in logic.
When the conditional symbol
?
{\displaystyle \to }
is interpreted as material implication, a formula
P
?
Q
{\displaystyle P\to Q}
is true unless
```

is true and

Q

{\displaystyle Q}

{\displaystyle P}

is false.

Material implication is used in all the basic systems of classical logic as well as some nonclassical logics. It is assumed as a model of correct conditional reasoning within mathematics and serves as the basis for commands in many programming languages. However, many logics replace material implication...

Enclosed Alphanumeric Supplement

Enclosed Alphanumeric Supplement is a Unicode block consisting of Latin alphabet characters and Arabic numerals enclosed in circles, ovals or boxes, used for a variety of purposes. It is encoded in the range U+1F100–U+1F1FF in the Supplementary Multilingual Plane.

The block is mostly an extension of the Enclosed Alphanumerics block, containing further enclosed alphanumeric characters which are not included in that block or Enclosed CJK Letters and Months. Most of the characters are single alphanumerics in boxes or circles, or with trailing commas. Two of the symbols are identified as dingbats. A number of multiple-letter enclosed abbreviations are also included, mostly to provide compatibility with Broadcast Markup Language standards (see ARIB STD B24 character set) and Japanese telecommunications...

Q with stroke

Q with stroke (?,?) is a letter of the Latin alphabet, derived from writing the letter Q with the addition of a bar through the letter ' s descender. The

Q with stroke (?, ?) is a letter of the Latin alphabet, derived from writing the letter Q with the addition of a bar through the letter's descender. The letter was used by scribes during the Middle Ages, where it was employed primarily as an abbreviation—a modern parallel of this would be abbreviating the word "and" with an ampersand (&). The letter was also used to write some modern languages. Between 1928 and 1938, the Lezgin and Dargin alphabets had used ?, but since 1938, both corresponding languages are written with Cyrillic-based alphabets, using the digraph ?? in place of ?.

When used to write the Latin language, ? could be used alone or as part of a word. Alone, it stood for quam; as part of a word, it stood for either quan- (as in ?do for quando) or qui- (as in ?l? for quilibet). In...

Enclosed Alphanumerics

Enclosed Alphanumerics is a Unicode block of typographical symbols of an alphanumeric within a circle, a bracket or other not-closed enclosure, or ending in a full stop.

It is currently fully allocated. Within the Basic Multilingual Plane, a few additional enclosed numerals are in the Dingbats and the Enclosed CJK Letters and Months blocks. There is also a block with more of these characters in the Supplementary Multilingual Plane named Enclosed Alphanumeric Supplement (U+1F100–U+1F1FF), as of Unicode 6.0.

Voiceless uvular plosive

for that sound, though it can be transcribed as ?q??, ?q??, or ?q?? (all symbols denote an advanced ?q?) or ?k?? (retracted ?k?). Guttural Index of phonetics

A voiceless uvular plosive or stop is a type of consonantal sound, used in some spoken languages. It is pronounced like a voiceless velar plosive [k], except that the tongue makes contact not on the soft palate but on the uvula. The symbol in the International Phonetic Alphabet that represents this sound is ?q?.

Voiceless uvular implosive

Alphabet that represents this sound is ??? ? or theoretically ?q???. A dedicated IPA letter, ???, was retired in 1993. Its manner of articulation is occlusive

A voiceless uvular implosive is a rare consonantal sound, used in some spoken languages. The symbol in the International Phonetic Alphabet that represents this sound is ??? ? or theoretically ?q???. A dedicated IPA letter, ???, was retired in 1993.

Kra (letter)

Kra (uppercase: K?, lowercase: ?) is a glyph formerly used to write the Kalaallisut language (also known as Greenlandic) of Greenland and is now only

Kra (uppercase: K?, lowercase: ?) is a glyph formerly used to write the Kalaallisut language (also known as Greenlandic) of Greenland and is now only found in Inuttitut, a distinct Inuktitut dialect. It is visually similar to a Latin small capital letter K, a Greek letter Kappa: ?, or a Cyrillic small letter Ka: ?.

It is used to denote the sound written as [q] in the International Phonetic Alphabet (the voiceless uvular plosive). For collation purposes, it is therefore considered to be a type of q, rather than a type of k, and should sort near q.

Its Unicode code point for the lowercase form is U+0138? LATIN SMALL LETTER KRA (ĸ). If this is unavailable, q is substituted. The letter can be capitalized as K?, but it is not encoded separately as a single letter because it is very similar...
