## Superdollar

*there are many features on supernotes that can be detected with conventional methods, new, more sophisticated supernotes could be produced to circumvent*

A superdollar (also known as a superbill or supernote) is a very high quality counterfeit United States one hundred-dollar bill, alleged by the U.S. government to have been made by unknown organizations or governments. In 2011, government sources stated that these counterfeit bills were in "worldwide circulation" from the late 1980s until at least July 2000 in an extradition court case.

While there are many features on supernotes that can be detected with conventional methods, new, more sophisticated supernotes could be produced to circumvent some conventional detection methods. Thus it may be possible to see some supernotes in circulation until they are detected.

Various groups have been suspected of creating such notes, and international opinion on the origin of the notes varies. The U.S...

Counterfeit money

*high quality, and likeness to the real US dollar. The sources of such supernotes are disputed, with North Korea being vocally accused by US authorities*

Counterfeit money is currency produced outside of the legal sanction of a state or government, usually in a deliberate attempt to imitate that currency and so as to deceive its recipient. Producing or using counterfeit money is a form of fraud or forgery, and is illegal in all jurisdictions of the world. The business of counterfeiting money is nearly as old as money itself: plated copies (known as Fourrées) have been found of Lydian coins, which are thought to be among the first Western coins. Before the introduction of paper money, the most prevalent method of counterfeiting involved mixing base metals with pure gold or silver. Another form of counterfeiting is the production of documents by legitimate printers in response to fraudulent instructions. During World War II, the Nazis forged British...

*Retrieved July 17, 2009. Fan, Linjin (January 11, 2008). "Mysterious \$100 'supernote' counterfeit bills appear across world". The Kansas City Star. Archived*

The Space Shuttle orbiter is the spaceplane component of the Space Shuttle, a partially reusable orbital spacecraft system that was part of the discontinued Space Shuttle program. Operated from 1981 to 2011 by NASA, the U.S. space agency, this vehicle could carry astronauts and payloads into low Earth orbit, perform in-space operations, then re-enter the atmosphere and land as a glider, returning its crew and any on-board payload to the Earth.

Six orbiters were built for flight: Enterprise, Columbia, Challenger, Discovery, Atlantis, and Endeavour. All were built in Palmdale, California, by the Pittsburgh, Pennsylvania-based Rockwell International company's North American Aircraft Operations branch. The first orbiter, Enterprise, made its maiden flight in 1977. An unpowered glider, it was carried...

#### North Korea–United States relations

*North Korea produced \$15–25 million worth of counterfeit Federal Reserve supernotes over several years for worldwide distribution in a "direct attack on a*

Relations between North Korea and the United States have been historically tense and hostile. The two countries have no formal diplomatic relations. Instead, they have adopted an indirect diplomatic arrangement using neutral intermediaries. The Swedish Embassy in Pyongyang is the U.S. protecting power and provides limited consular services to U.S. citizens. North Korea, officially the Democratic People's Republic of Korea (DPRK), does not have an embassy in Washington, D.C., but is represented in the United States through its mission to the United Nations in New York City which serves as North Korea's de facto embassy.

The source of the hostilities dates back to the Korean War in which both countries fought on opposite sides. Since the armistice was signed, areas of contention have since revolved...
